Pakedge Unveils New Type of Wireless Access Point

SAN MATEO, CA — Pakedge Device and Software, San Mateo, California, has introduced the WAP-C2- the second generation of their Commercial Grade, In-Ceiling, Wireless Access Points. This In-Ceiling and now, In-Wall device joins its predecessors, the Commercial Grade, In-Ceiling Wireless Access Point (WAPC-11G) in offering the installation of a truly customized wireless access point, tuned for optimal service in either commercial or residential environments.

Building on the dependability and clean design of its predecessors, the WAP-C2 offers further enhancements. Of real interest to installers is the fact that this device has been designed to be “slide in and slide out” interchangeable with the WAPC-11G and Pakedge to be release 802.11n device by the end of 2007. Additionally, the WAP-C2 Power-over-Ethernet has been improved to be “plug and play” with most of the leading 802.3af compliant switches on the market today.

Finally, required installation depth was reduced to accommodate a 2x4 framed wall. This improvement was achieved while maintaining the cooling capabilities necessary for long term reliability in a embedded ceiling or wall product. And finally even with all these enhancements, the price of the WAP-C2 was greatly reduced to fit any budget. This enhanced flexibility will be highly appreciated by custom installers.

The WAP-C2 continues to offer the clean design and reliability found in its predecessor. The WAP-C2 is sleekly and ruggedly designed to fit seamlessly into any home or

commercial setting. It features the highest power rating of any wireless access point sold for the residential market. Following those models, this new wireless access point lets installers upload preset configurations to each access point, allowing for fast installation and configuration in multiple wireless access point installations. Lastly, the WAP-C2 continues the tradition of offering the option of increasing or decreasing transmission power output after installation for security and/or coverage that is both optimal and uniform, creating a completely custom installation.

Like its predecessors, the WAP-C2 will be sold exclusively through authorized custom electronic retailers, and home automation and computer network installers.

“The combination of high power output, rugged design, and one of the industry’s best receiver sensitivities continues the tradition established by our In-Ceiling Wireless Access Point and our new wall mounted WAP-W2,” says Dusan Jankov, Vice President and a founder of Pakedge Device and Software. ‘Like these devices, this wireless access point blends seamlessly into any environment and accommodates the wireless networking need of every installation scenario.’”

COMPANY BIO:

Pakedge Device and Software creates innovative networking products for people who demand performance, features, and reliability. The products use the most advanced wireless and networking technology. They are designed for professionals to install and consumers to enjoy. For more information and system specifications, please visit our website at www.Pakedge.com.
