Pakedge Debuts Its C36 Wireless Access Point Controller at CEDIA 2013

Foster City, CA – [Pakedge Device & Software](#) is introducing its **C36** macrocell wireless access point (WAP) controller, which makes it easier to configure and manage every WAP in a large wireless network by using automated, “intelligent” configuration tools.

The Pakedge **C36** has a sleek attractive design featuring the company’s new A/V Housing. All cables mount from the rear for a clean installation and front-panel appearance.

The Pakedge **C36**’s highly intuitive web-based interface makes setting up even a complex wireless network fast and easy. In a macrocell network, each wireless access point must work together to ensure seamless handoffs between devices and no dropouts when a wireless device is used anywhere in the home. The Pakedge **C36** facilitates coordinating all the WAPs in a large custom-installation home network for optimum performance.

Its Global Management software is designed to get as many access points as possible up and running quickly, and applies configuration to all access points on the network at once. The **C36** expands the performance of Pakedge proprietary technology including Sectormaxx™ to improve AP range, Smartwav™ to enhance data reliability and Trustream™ to mitigate interference creating seamless wireless harmony. If desired, a separate guest network can be set up. The **C36**’s Client Identification Tool will give each client on the network a name instead of having to use the MAC address, making it extremely easy for the installer to identify laptops, tablets, mobile devices and wireless handsets.

The **C36** is compatible with Pakedge’s BakPak Cloud app that enables a smartphone, tablet or laptop, to configure, monitor and establish pre-defined alerts for the **C36**. The **C36** is available now. Please consult with a Pakedge dealer for pricing.

Pakedge C36 wireless access point controller

C36 KEY FEATURES AND BENEFITS:

- Designed specifically for custom-installation and media streaming applications
- Intuitive web-based interface makes setting up even a complex wireless network fast and easy
- Provides the interface to manage all access points at one time
- Configures all apps on a network at once
- Automatically selects channels for each WAP, to avoid interference
- Client Identification Tool gives each device a name instead of their MAC address
- Compatible with Pakedge's BakPak Cloud app enabling interface with remote devices

COMPANY PROFILE:

Pakedge Device & Software creates innovative networking products for people who demand performance, features, and reliability. Our products use the most advanced wireless and networking technology. They are designed for professionals to install and consumers to enjoy. For more information and system specifications, visit www.pakedge.com.
