Pakedge Debuts Its S24AV Fully Managed 24-Port Gigabit Switch at CEDIA 2013

Foster City, CA –[Pakedge Device & Software](#) is introducing its **S24AV Fully Managed 24-Port Gigabit Switch**, which is designed specifically for custom installation and media streaming applications. Pakedge is demonstrating the **S24AV**, winner of a 2013 Resi award from *Residential Systems* magazine.

The Pakedge **S24AV** is a highly versatile fully managed 24-port gigabit Ethernet switch that offers enterprise-class reliability and versatile configuration options to accommodate complex, large-scale custom-installation audio/video and commercial applications. It features Pakedge's new sleek, attractive A/V Housing design that complements audio/video installations and entertainment systems. All cables install from the rear for a clean and neat installation and front panel appearance.

The **S24AV** was created to facilitate easier networking setup and configuration. It is designed to get as many apps and connected devices as possible up and running quickly. It features front-panel LEDs that provide ready indication of the status of connected devices and is constructed with a heavy-duty metal housing and premium-quality parts to deliver reliable service even in the most demanding environments.

The **S24AV** can be configured by web-based GUI, serial command line interface (CLI) or Telnet using Pakedge proprietary Control and Automation System Capable (CASC) technology. It offers plug-and-play and auto-negotiation capabilities that enable the **S24AV** to auto-detect a connected device and connect to it at the highest available speed.

The Pakedge **S24AV** is cased in a heavy-duty 1U-rack-space housing with rack-mount hardware included. The unit supports Nway auto-negotiation to automatically detect 10/100/1000 Mbps network speed and full/half duplex mode. Its Auto-MDI/MDI-X port functionality eliminates the need for crossover cables. Front-panel blue LEDs provide real-time status monitoring. The **S24AV** provides two SFP expansion slots to support Mini-GBIC modules. Series modules can be smoothly connected with Gigabit networking to ensure optimal networking speed and performance.

Availability will be by the end of 2013. Please consult with a Pakedge dealer for pricing.

Pakedge S24AV fully managed 24-port gigabit switch

S24AV KEY FEATURES AND BENEFITS:

- Designed specifically for custom-installation and media streaming
- 24 ports
- Configurable via web GUI, command-line interface (CLI) or Telnet
- Plug-and-play and auto-negotiation capabilities allow the **S24AV** to auto-detect and connect to a device with maximum speed
- Two SFP slots accommodate mini-GBIC modules
- Designed for simple installation: 1U rack space; all cables mount from the rear for a clean appearance; easy-to-read blue LEDs aid in cable installation and diagnostics
- Supports VLAN
- Extensive security features

COMPANY PROFILE:

Pakedge Device & Software creates innovative networking products for people who demand performance, features, and reliability. Our products use the most advanced wireless and networking technology. They are designed for professionals to install and consumers to enjoy. For more information and system specifications, visit www.pakedge.com.
