Pakedge Introduces BakPak Apple® IOS App, Enabling Configuration of Pakedge Components Via iPad® or iPhone™

Foster City, CA – Pakedge Device and Software today announced the introduction of its BakPak Apple IOS app, which enables an iPad or iPhone to reboot and remotely power cycle individual ports on any Pakedge PoE Switch and Power Distribution Unit. The BakPak app is currently available on the iTunes® store.

The BakPak app allows an Apple IOS 4.3, through the most current IOS iPad or iPhone or iPod, to remotely power cycle the Power over Ethernet (PoE) ports on Pakedge Switches or Power Distribution Units. Installers can do this either on the job or from anywhere – if a customer in New York wants their system to be changed and the installer is in California, they can still make the change via their iPad or iPhone.

In addition, the app lets installers add multiple jobs/locations to their project databases, with multiple devices per location. Systems integrators can now store all their device profiles and settings on their iPad or iPhone for immediate access wherever they go. In addition, they can back up all their profiles and settings to iCloud, or a local device, and can then load their settings to a different iPad or iPhone.

When installers are on a job location, they can use their iPad or iPhone to check the data or PoE status of their devices by sending commands to the devices themselves and looking at their front panel LEDs. Users can also rename the ports to show the names of the equipment that is connected to the ports in the BakPak app.

“Our BakPak app gives Pakedge integrators a convenient new tool for configuring their customers’ systems, as well as for storing and backing up customer data,” said Victor Pak, president and CEO of Pakedge. “It’s part of our ongoing efforts to make life easier for our installers and enable them to better serve their clients.”

COMPANY PROFILE:

Pakedge Device & Software creates innovative networking products for people who demand performance, features, and reliability. Our products use the most advanced wireless and networking technology. They are designed for professionals to install and consumers to enjoy.
