**Pakedge RB-Kit Preconfigured Enterprise-Class Router and Security Appliance
Is Approved for Use With Control4Home Control Products**

Foster City, CA – [Pakedge Device & Software](#) today announced that its RB-Kit **Preconfigured Enterprise-Class Router and Security Appliance** has been approved for use with Control4® systems.

The Pakedge RB-Kit Preconfigured Enterprise-Class Router and Security Appliance offers high-performance routing and robust security protection for custom-installation audio/video systems and home networks. It comes preconfigured with a single LAN (Local Area Network) for faster and easier installation in small to medium size systems that require uncompromised reliability.

“After extensive testing, we are very excited that Control4 approved our RB-Kit,” said Victor Pak, president and CEO of Pakedge. “With the RB-Kit, systems integrators have an enterprise-class router for their custom installations that provides high bandwidth and robust gateway security.”

“Successful home control requires all of the components in a home automation system to work together seamlessly,” noted Paul Williams, Vice President of Support Services at Control4. “The Pakedge RB-Kit delivers absolutely reliable, networking performance and compatibility when used in a Control4 system.”

The Pakedge RB-Kit is ultra-reliable, and offers extensive multi-threat security protection. It provides an ideal backbone for a Control4 automation system, and is preconfigured out of the box for simpler installation without the complexities that can occur with enterprise-level configuration. The RB-Kit has dual WAN links that ensure more reliable Internet connectivity – if one connection becomes inoperative the RB-Kit will automatically switch over to the other connection. It includes VPN (Virtual Private Network) access and comes preconfigured with a secure guest network.

The Pakedge RB-Kit Preconfigured Enterprise-Class Router and Security Appliance is currently available. Please contact sales@pakedge.com for pricing.
