**Pakedge's K62U Gigabit Router and 24-Port Audio/Video Bridging System
Wins *Electronic House* 2012 Products of the Year Award**

Foster City, CA – [Pakedge Device & Software](#) today announced that its **K62U Preconfigured, Multi-VLAN, Gigabit Router and 24-Port Configurable Audio/Video Bridging System; Preloaded with Parental Website Controls and System Antivirus** has received a 2012 Products of the Year award from *Electronic House* magazine.

The *Electronic House* 2012 Products of the Year award winners were chosen by a panel of industry leaders along with the editors of *Electronic House* and *CE Pro*.

The Pakedge K62U provides the highest levels of audio/video bridging and smart home networking performance, along with easy installation and robust security including Pakedge's exclusive Unified Threat Management (UTM) parental website controls and system antivirus protection.

“We are proud that our K62U has been recognized with a 2012 Products of the Year award in the Computers, Networking Devices and Storage category,” said Victor Pak, president and CEO of Pakedge. “The K62U offers features and functionality that are designed specifically for custom-installation home networks and the most demanding audio/video bridging applications.”

The Pakedge K62U includes the Pakedge R6V router, SW-24GBM fully managed 24-port gigabit Ethernet switch and mounting brackets. It offers extensive connections including 23 VLAN gigabit switch ports to accommodate larger networks, five preconfigured VLANs including a secure guest VLAN, and two fiber ports for longer cable runs.

The K62U comes preconfigured for a wide variety of applications, from basic networks to complex residential systems. It also provides dual WAN (Wide Area Network) ports and a DMZ port for easy connection of web servers, ftp servers or gaming consoles without additional configuration.

The Pakedge K62U provides extremely high parental and security protection, thanks to its Unified Threat Management functionality that blocks viruses, questionable websites and other unwanted content at the router before it can get past the firewall. UTM lets parents and administrators assign different levels of user access. Parental website controls block at the gateway level eliminating the need for excessive software, as well as ensuring safety for the whole home or office. The Anti-Virus system is constantly and automatically updated with new

virus protection profiles. It is capable of identifying 18,000 virus types.

COMPANY PROFILE:

Pakedge Device & Software creates innovative networking products for people who demand performance, features, and reliability. Our products use the most advanced wireless and networking technology. They are designed for professionals to install and consumers to enjoy. For more information and system specifications, visit www.pakedge.com.
