Pakedge Premieres Its R10U and R10 Gateway Appliances

Foster City, CA - [Pakedge Device & Software](#) is premiering its **R10U and R10 Preconfigured Gateway Appliances**, designed to provide the highest levels of custom-installation, smart networking and security system performance in larger residential and commercial networks.

Both gateways come preconfigured for easy installation. The R10U and R10 provide 16 LAN switch ports on the front and are configured with eight VLANs with Pakedge's proprietary data management protocol named "TruStream™." The TruStream™ suite of features is designed to provide best-quality streaming media performance, whether operating over either a wireless or wired connection.

The R10U and R10 are identical except the R10U incorporates Pakedge's exclusive UTM Unified Threat Management parental website controls and system antivirus protection. UTM provides an extremely high level of protection by blocking viruses, questionable websites and other unwanted content at the gateway before it can get past the firewall. Offering three levels of user access, UTM blocks unwanted website groups for the entire home and blocks selected devices from questionable websites. The R10 also includes a host of effective security features including parental website control. For both models, security scanning is done within hardware

(ASIC) rather than software, which results in increased network speed.

Ideal for use with streaming media and devices like streaming high-definition IP cameras, HDMI over IP transmitters and high-throughput wireless access devices, both models also feature WAN, USB management, console and DMZ ports. The DMZ port allows for easy connection of web servers, ftp servers, or gaming consoles without additional configuration and provides an extra level of security to a LAN or WAN. The USB port enables easy connection to the gateway's GUI (graphical user interface) without having to know the router's IP address.

Like all Pakedge products, the R10U and R10 are designed for ease of installation and enterprise-level reliability. Both feature recessed rack-mount brackets for easier cable mounting and mount in a standard 1U rack space. These brackets have three depth selections including flush mount, half depth and full recess that allows for convenient cable management on the front side of the rack.

The Pakedge R10U and R10 gigabit gateway appliances are available now. Please contact sales@pakedge.com for pricing.

COMPANY PROFILE:

Pakedge Device & Software creates innovative networking products for people who demand performance, features, and reliability. Our products use the most advanced wireless and networking technology. They are designed for professionals to install and consumers to enjoy. For more information and system specifications, visit www.pakedge.com
